

You are provided with the following schema. Using Client-Side Rendering (CSR), perform CRUD operations (Create, Read, Update, Delete) based on this schema. You may use any frontend technology (e.g., React.js) to demonstrate CSR functionality.

Schema: **JobApplication**

Field	Type	Description
id	String	Unique identifier (UUID)
companyName	String	Name of the company
jobTitle	String	Title of the job role
application Date	Date	Date the application was submitted
status	String	Application status (e.g., Applied, Interview, Offer)
jobLink	String	URL to the job listing
notes	String	Any additional notes or follow-up reminders

Tasks:

1. **Create** a new job application record through a form.
2. **Read** and display all job applications in a list, table, or card layout.
3. **Update** details of an existing application (e.g., status).
4. **Delete** a job application entry.
